nanoIR2

Opening of the First AFM-IR Demo & Service Lab in Europe

Ismaning near Munich, 25 November 2015 – Physical Electronics GmbH opens its new AFM-IR Demo & Service Lab.

The Combination AFM-IR developed by Anasys Instruments is now accessible for all scientists, engineers and applied sciences interested people, working in industry, institutes or universities in Europe. The participants impressed the possibility to do IR Spectroscopy with sub-50nm Spatial Resolution (sample dependent).

The opening event introduces the technique theoretically and practically. Information diversity, depth of expertise and the practical part of the opening attracted a maximum of attention. The nanoIR-s, Anasys Instrument's latest platform System was also presented. Combining s-SNOM and AFM-IR to provide complete nanoscale IR analysis.

Physical Electronics GmbH thanks again all participants and interested persons and is looking forward to Welcome You soon.
